Find the **month** you were born in the following charts. Follow the dates down the left-hand side until you come to the **date** you were born. Follow across the list till you reach the current year. That is your current cycle. To calculate the number manually, add the month + the date + the current year, and reduce the figure to a single digit.

For example, if you were born on July 15<sup>th</sup> of any year and you want to know your Personal Cycle for 2009, go to the page for July. Find Day 15 on the left-hand side, and the year 2009 across the top. The intersecting cell will show your personal cycle.
